

Network Monitoring

Display pc status at network(PC off or PC on) and manage network host and user access.

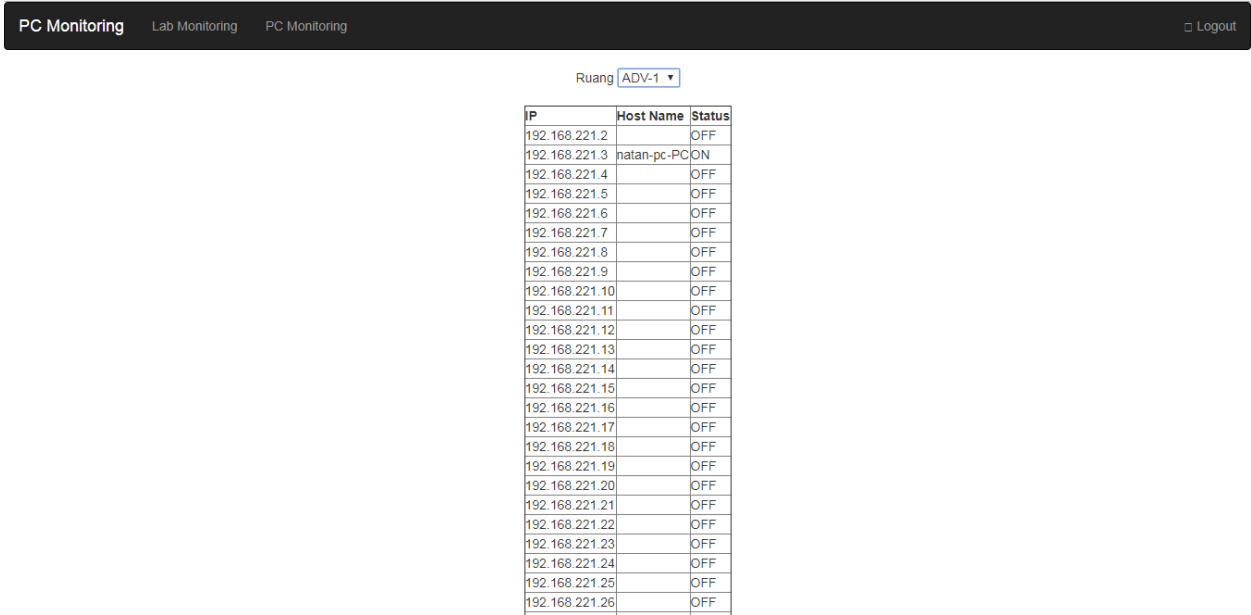

1. Map Monitoring networking user page

If one of pc or more register in spesific room, and that pc is turn on, then map off the room will change the colour to green, otherwise if the PC is turn off, then it will change the room colour from green to red.

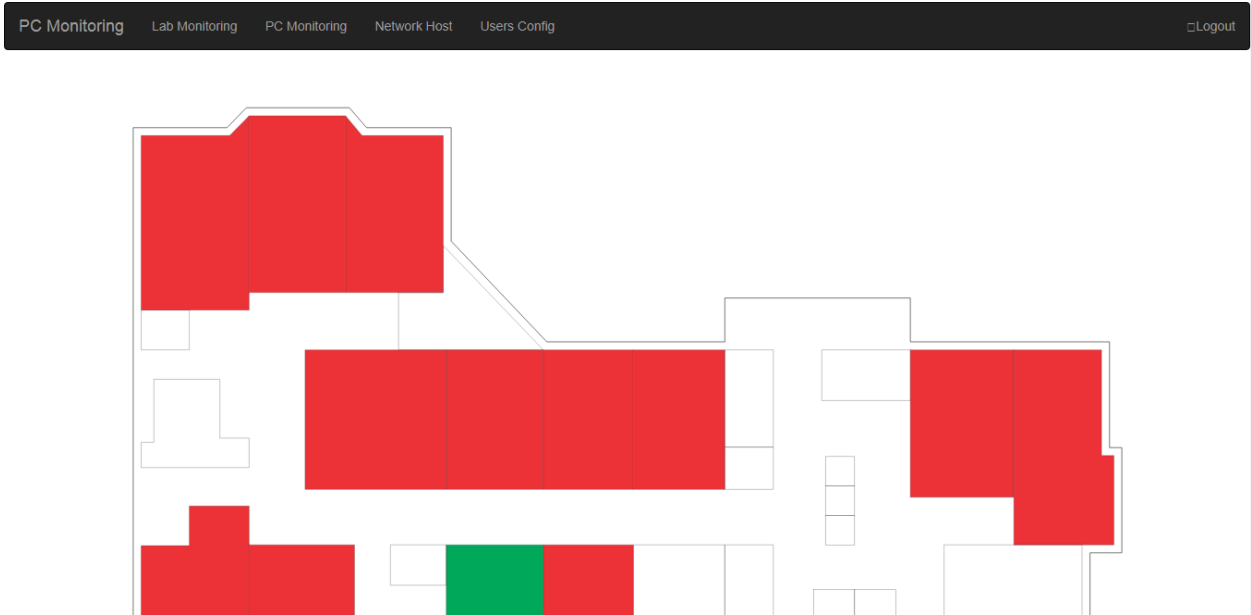

2. Show PC status ON and Off at user page

If user choose the spesific room in drop down, then it will show all status of PCs in that room (ON/OFF).

3. Map Monitoring networking admin page

If one of pc or more register in spesific room, and that pc is turn on, then map off the room will change the colour to green, otherwise if the PC is turn off, then it will change the room colour from green to red.

4. Show PC status ON and Off at user page

If user choose the spesific room in drop down, then it will show all status of PCs in that room (ON/OFF).
